BSC Fermi Hard Fork Set for January 14, 2026

The BNB Smart Chain (BSC) network is getting ready for a major technical upgrade with the launch of its Fermi hard fork on January 14, 2026. This hard fork will improve network performance and scalability by reducing the block interval. Making the time between blocks from around 750~ milliseconds to roughly 450~ milliseconds. It doesn't sound like much but ...

Monad: The New L1 On The Block...chain

Monad is one of the most ambitious infrastructure bets of this cycle. A new L1 that questions the tradeoff: that widespread decentralization comes with slower speeds. Other chains proved speed was possible, but with caveats. Faster performance came at a cost. You gained efficiency, but required more centralized control to achieve it ...

Rocca Wallet on Algorand

Rocca is a new digital wallet built for people who want to use crypto without needing to understand every technical detail behind it. Designed specifically for the Algorand ecosystem, Rocca will focus on simplicity and ease of use. The wallet is a self-custody wallet, meaning users are in control of their own funds rather than relying on an exchange ...

What Is a Blockchain?

Crypto feels confusing because people talk about many different things at once. Bitcoin. Ethereum. NFTs. Stablecoins. They all get called "crypto", even though they do very different things. To understand any of them, you first need to understand one idea. What a blockchain actually is. A Blockchain Is a Shared Record. At its core, a blockchain ...

How Blockchains Work

In the first article, we explained what a blockchain is. A shared record. Kept by many computers. Very hard to change. Now comes the next question. If many computers share the same record, who decides what gets added next? That decision process is one of the most important parts of any blockchain. It is called validation ...

The Luxurious Lounge Token: Media Power Meets On-Chain Conviction

Most tokens launch with hype. The Luxurious Lounge Token launched with a camera on and a mic hot. TLLT isn't a promise wrapped in a roadmap. It's the on-chain extension of a live, growing media platform that is already in motion. Streams are running. Products are shipping. The audience is building in real time. This isn't theory. It's execution in public. ...

Jupiter Rewards This January

Jupiter, one of the most popular DEX trading aggregators on the Solana network, is preparing its annual airdrop, with the eligibility window closing on January 30. Jupiter plays a huge role in Solana's ecosystem. It allows traders to swap tokens by automatically routing trades across multiple decentralized exchanges to find the best available prices ...

NORMIE on Solana

Normie is not here to dangle a rented supercar fantasy or whisper sweet lies while your portfolio quietly hemorrhages. It is not here to chant slogans, bless your bags, or ask for blind faith while the candles melt into red static. Normie exists for people who actually inhabit the chart. The Degens who check price action before unread messages. The traders who ...
